Introduction

UDS Enterprise is the main component in a desktop virtualization platform, allowing the administration and management of virtual desktops, among other IP services, and their life cycle.

Thanks to the UDS Enterprise architecture and design, it is possible to develop new functionalities according to the clients' needs.

UDS Enterprise allows you to configure virtual desktop platforms with low acquisition costs, as it permits virtual desktops to be deployed on different hypervisor platforms, both proprietary and Open Source. It supports desktop and server Windows virtual desktops.

With UDS Enterprise it is possible to connect to Windows virtual desktops using a wide variety of alternatives, including those which incorporate access via HTML5.

Additionally, UDS Enterprise is responsible for automating the deployment of Windows virtual desktops, managing their life cycles at all times.

To carry out all these tasks, UDS Enterprise incorporates an agent (UDS Actor) that runs on the Windows desktops, creating a connection channel with the operating system. This allows UDS Enterprise to acquire usage data from the machine at all times and perform controlled operations without interrupting user activity.

What does a user station based on Windows provide?

Standardization. Both the desktop and server versions of Microsoft Windows are currently the most frequently implemented operating systems. Many tools and applications are developed to be compatible with and easily integrated into this operating system.

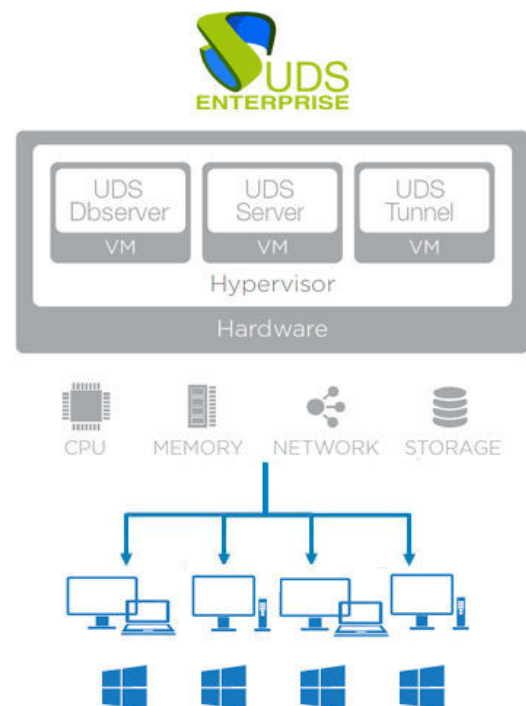

Easy application installation. Any user can easily install applications by using assistants.

Unlimited services. Due to the popularity of the operating system, a large number of companies and an unlimited number of technical experts can be found on the market offering support and maintenance services.

Centralized management tools and administration.

The operating system incorporates its own centralized administration and management console, to which different modules can be added. The manufacturers of additional management software develop their tools to be integrated into the management console, resulting in a very similar environment appearance. They are also very user-friendly.
