COUNTING USERS IN UDS ENTERPRISE: NAMED AND CONCURRENT

UDS Enterprise offers two user licensing models: **named** and **concurrent**. The difference lies in the criteria used to determine which users consume a license.

Named users

The named user model counts users who have **successfully logged in to UDS Enterprise at least once**.

Having an account in one of the configured authenticators, such as Active Directory (AD), does not in itself consume a named user license. A user starts being counted when they successfully log in to UDS Enterprise for the first time.

Concurrent users

The concurrent user model counts users who, at a given time, have **at least one service assigned** in UDS Enterprise. A single user may have several services assigned, but consumes only one concurrent user license, regardless of the number of services assigned.

License consumption is linked to this assignment. If **a user's assignment to a service is persistent**, meaning that the service is permanently assigned, the user **consumes a concurrent user license for as long as the assignment remains in place, even when they are not connected or using the service**.

VIRTUAL CABLE'S SMART DIGITAL WORKPLACE SOLUTION

About UDS Enterprise

UDS Enterprise is a solution for **workplace virtualization** that is fully **customizable**. It provides **secure 24/7 access**, from any **location** and **device**, to all the applications and software of an organization or educational institution.

It brings together, in a single console, **virtualization** of **desktops** and **applications** for **Windows** and **Linux**, as well as **remote access** to Windows, Linux and macOS computers. Its open source foundation ensures **compatibility with any third-party technology**. It can be deployed **on premises**, in public, private, hybrid or **multicloud** environments. It can even **combine** multiple environments at the same time and perform **capacity bursting automatically** and intelligently to optimize performance and efficiency. All with a **single subscription**.

About Virtual Cable

Virtual Cable is a company specializing in the **digital transformation** of the **workplace**. The company develops, supports and markets UDS Enterprise. It has been recognized globally as an ***IDC Innovator in Virtual Client Computing***. Its team of experts has designed **smart digital workplace solutions (VDI, vApp and remote access to physical computers)** tailored to **each sector** to provide a unique user experience fully adapted to the needs of each user profile. Virtual Cable's professionals have **more than 30 years of experience** in IT and software development and more than 15 in virtualization technologies. Every day, **millions of Windows and Linux virtual desktops are deployed worldwide with UDS Enterprise**.
